

Intermediate Spanish 2

1. Honors course requirements:

The student, an engineering major, will carry out a semester-long project that adapts this class to his own field of study and prepare him to potentially work overseas.

2. Description of alternative assignments:

The student will compile a report on engineering terminology in Spanish, engineering jobs and associated demand in Spanish-speaking countries, and pathways for US engineers to work in Spanish-speaking countries. The student will present his findings in a 10-page paper and associated oral presentation, both in Spanish.

The paper and presentation will both be due April 3. The student will check in on progress, either in person or via email, in the final week of each month leading up to the deadline.

3. Describe how the final grade in the course will be calculated, including the *Honors* content:

The paper and presentation will each count for 8% of the total grade, applied within the existing Writing and Oral sections of the grade distribution.
